INSTRUCTION: ANSWER ALL

- a. If given a class, with a variable of type double named **balance** defined in it, write a Getter (Accessor) and Setter (Mutator) methods for the **balance** variable.
- b. Assume that we defined a class called RandomGenerator. Create an object of this class.
- c. Use any loop to print the first 100 numbers.
- d. The method definition below should return the greater of two numbers. Implement the method.

```
Public double greatest (double first, double second){  
  
}
```
